DE 23 50763

The document in German (DE 23 50763) relates to a rotary molding process in which heating of a single layer stops at a time comprised between 15 % and 75%, preferably between 25% and 50%, of the total time for curing the layer. A better structure of the layer is obtained. This patent does not and cannot be applied to a foaming layer, because the mentioned advantage is a decrease of bubbles inside the layer.
